DEDICATION

We recognize that each case within this report represents the death of a person whose absence is grieved by beloved family, friends, and our community. To those individuals, their loved ones, and to all the citizens of Douglas County who share in the loss, this report is dedicated.

TABLE OF CONTENTS

A Personal Message from Coroner Romann

Welcome to the 2019 Douglas County Coroner's Annual Report. It gives me great pleasure in drafting my fifth Annual Report, bringing all our hard work to graphic display. This is far more than a bunch of verbiage presented at a campaign breakfast. It is the pictorial version of Douglas County meets the National Standards in our profession. Each Annual Report reflects the stepwise achievements by our office on behalf of our service area.

2019 had its challenges. By virtue of earlier commitments, we have continued to strive for the highest level of accreditation in Medicolegal Death Investigation. All our MDI's have attained American Board of Medicolegal Death Investigation (ABMDI) accreditation. Eight of them have reached the highest level – Board Certification (F-ABMDI). By count, we are one of the few counties in the nation to have this many board-certified medicolegal professionals. Given this fact, between the MDIs, myself and the Chief Deputy, we have approximately 134 years of service in dealing with decedents and the families of the decedents. Furthermore, we are currently seeking accreditation by the International Association of Coroners & Medical Examiners (IACME). I would submit there are very few County Coroners that can brag about this. Meanwhile, each of us maintains the required Continuing Education credits annually. We continue to participate in three (3) brain study programs (Harvard Brain Tissue Resource Center, Boston University CTE Center, and Brain & Tissue Bank University of Maryland) and have specially trained autopsy assistants on-call for this purpose. We remain #1 Coroner's Office for Tissue & Organ donations in both Colorado and Wyoming according to the Colorado Donor Alliance. As part of the Tissue Donor Program, we participate with the University of Colorado Neurology Department's Post-Herpetic Neuralgia Research. Most recently we have installed COHERO and CORHIO software which enhance the sophistication of our database registry and accelerates our ability to review past electronic medical records.

I would be remiss if I failed to brag about our MDI's. Frankly, they are what makes our office an unbridled success. They subscribe to all the demands listed above in combination with appreciable skills in forensic interviewing, family counseling, and grief management. Daily, we remain committed to responding to death scenes in the shortest possible turnaround time anywhere in the country, and having a live person answer the phone 24/7.

Lastly, I must "tip my hat" to our extended families. The proper function of the Coroner's Office is a daunting task. It doesn't rest on weekends, nighttime nor holidays. Deaths don't obey any calendar, seasonality or clock. They have no regard for "dinners on the table", or "I was up all night" or "you were going to help with my term paper." Nobody will wait while you watch the last quarter of a football game. Death investigations consume 1-4 hours of whatever you had planned to do. All that goes to husbands, wives and partners as well as toddlers and teenagers who want your attention. Without their support and honest belief in our service, we could not do what we do, when we do it, and with as much compassion for grieving families as they deserve.

Jill E. Romann
Douglas County Coroner

Duties of the Coroner's Office

The Coroner's Office is a statutory office, mandated by the Colorado Constitution and Colorado Revised Statutes (C.R.S.) 30-10-601 through 621. Under these statutes, the Coroner's primary role is to make proper inquiry regarding the cause and manner of death of any person who dies under the jurisdiction of the office.

Types of deaths that are reported to the Coroner:

- No physician in attendance.
- The attending physician is unable or unwilling to certify the cause of death.
- The attending physician has not been in actual attendance within the past 30 days prior to death.
- All cases in which trauma may be associated with the death, such as traffic accidents, gunshots, falls, etc. This includes inpatients who have sustained fractures any time in the past.
- Deaths by poisoning, suspected poisoning, chemical or bacterial, industrial hazardous material or radiation.
- All industrial accidents.
- Known or suspected suicides.
- Deaths due to self-induced or unexplained abortion.
- Operating room deaths and deaths that occur during a medical procedure.
- All unexplained deaths.
- Deaths that occur within 24 hours of admission to a hospital or nursing care facility.
- Deaths in the custody of law enforcement.
- Deaths of persons in the care of a public institution.

Deaths meeting the above criteria are investigated by the Coroner, with jurisdiction that may or may not be assumed in individual cases with autopsies performed as determined necessary by the Coroner. Per statute, autopsies must be performed by a Forensic Pathologist (CRS 30-10-606.5). The result of the investigation determines final cause and manner of death.

The cause of death is defined as the disease or injury that resulted in the death of an individual. The manner of death is ruled as Natural, Accident, Homicide, Suicide, or Undetermined. Undetermined manner of death includes deaths in which the manner could not clearly be determined, as in some drug overdoses where there is no clear evidence as to whether the event occurred with intent or accidently. Undetermined is also used for Sudden Unexpected Infant Death Syndrome (SUIDS), and in other cases, such as found skeletal remains, where no other clear manner of death can be determined.

In addition, associated responsibilities of the Coroner's Office include, but are not limited to:

- Legal pronouncement of death.
- Legal identification of the deceased.
- Taking custody of the body and personal belongings.
- Legal identification and notification of next-of-kin.
- Issuance of death certificates.
- Helping families understand the actions of the Coroner's Office and helping them through the grieving process.

<u>The Douglas County Coroner's Office operates 24/7/365 serving the citizens of Douglas County!</u>

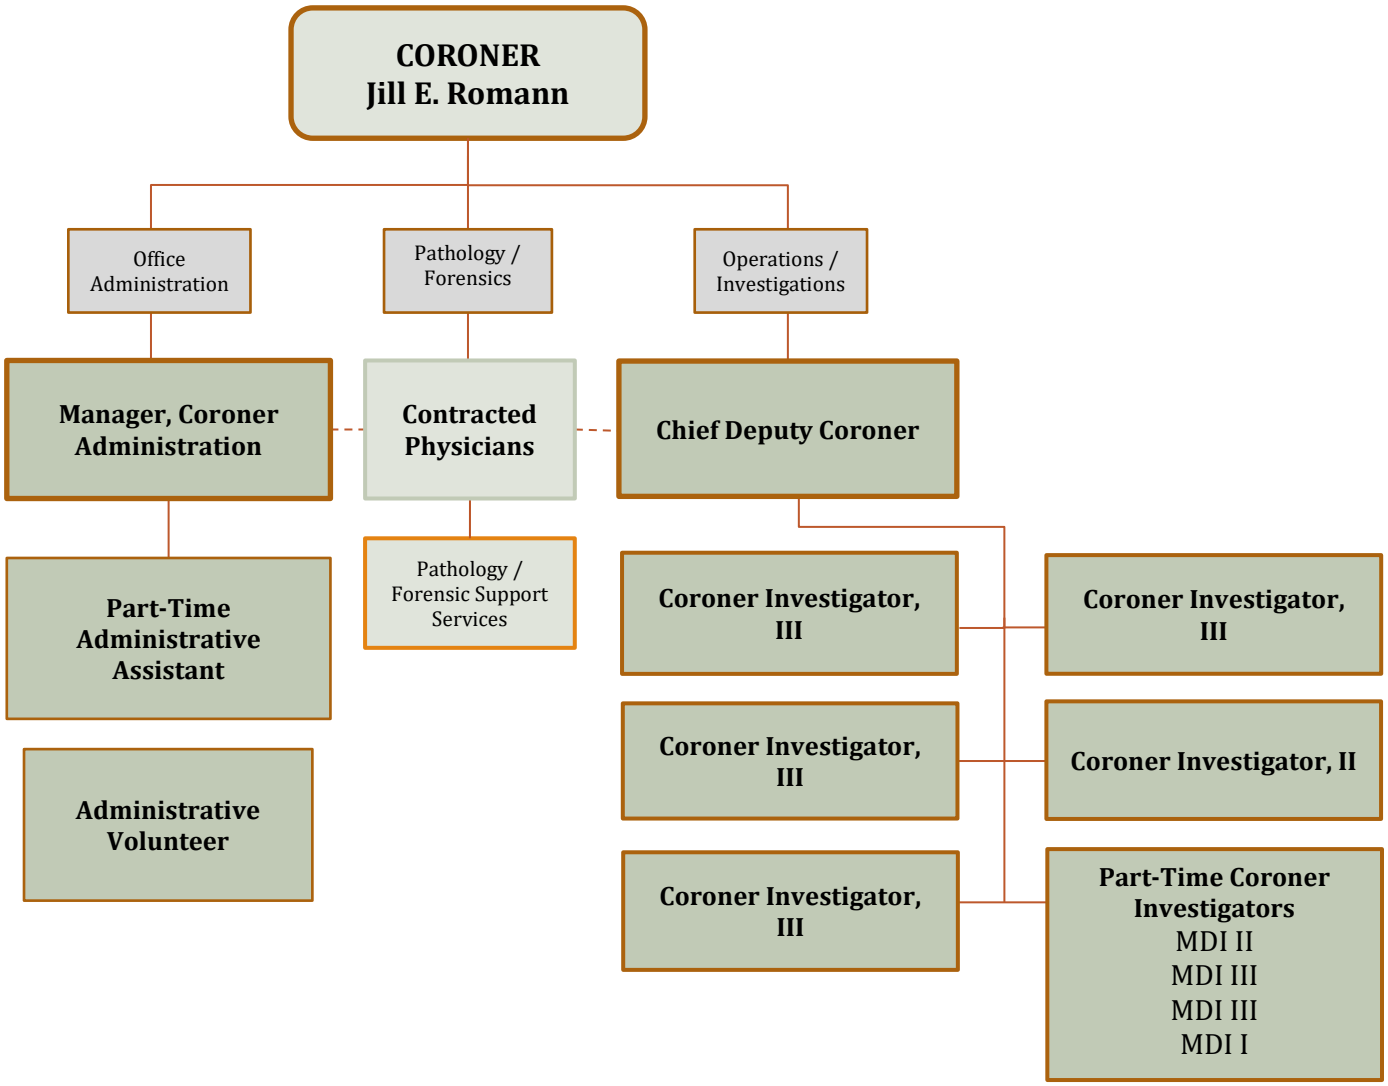
MISSION STATEMENT

As an impartial, independent agency, our mission is to serve the public by providing the citizens of Douglas County, medical professionals, and members of the justice system, with accurate, scientific, and unbiased medical based determination of cause and manner of death, as well as completion of associated responsibilities. To this end, we strive for nothing less than excellence in practice, integrity, compassion, and continuous advancement in the field.

CORE VALUES

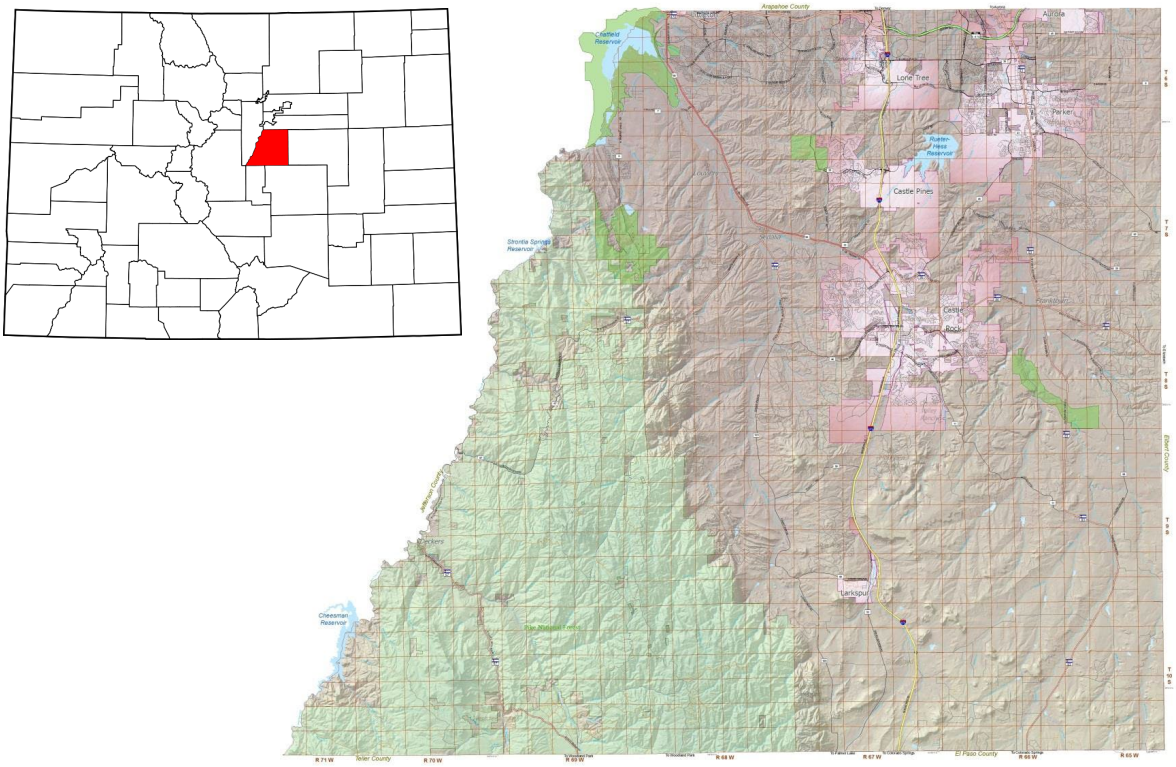
SERVICE □ COMPASSION □ PROFESSIONALISM □ DIGNITY □ INTEGRITY

DCCO Organizational Chart

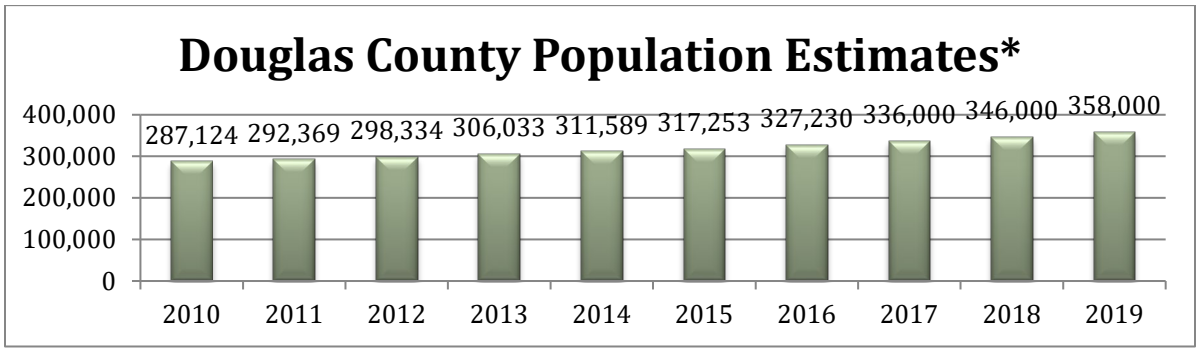


Jurisdictional Boundaries

Jurisdictional boundaries of the Douglas County Coroner's Office lie coextensive with the boundaries of Douglas County, Colorado. Douglas County lies virtually in the geographic center of Colorado and is approximately 844 square miles in size. It's located between Colorado's two largest cities, Denver and Colorado Springs, and offers a wide array of urban and rural regions. Incorporated municipalities include: Aurora, Castle Pines, Castle Rock (County seat), Larkspur, Littleton, Lone Tree, and Parker. Elevations range from 5,400 feet in the northeast to 9,836 feet at Thunder Butte in Pike National Forest.



Population of Douglas County



**2010-2015 Source CO State Demography Office. 2016-2018 Source Douglas County Community Development. 2019 Source CO State Demography Office.*

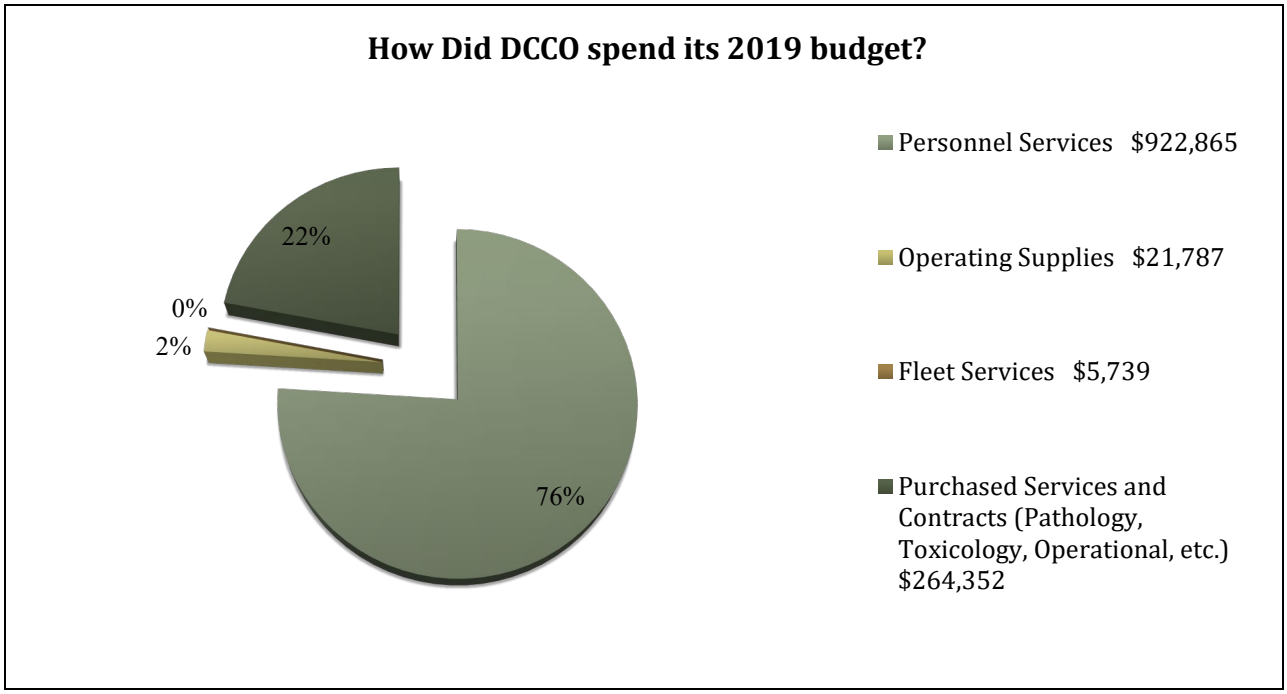
Budget

Funding

Funding for the Coroner's Office originates from the Douglas County general fund. In 2019, the County Manager and Commissioners approved a budget of $1,287,385. This amount represented less than 1% of the total 2019 General Fund, which was $154 million. It represented 0.3% of the total 2019 Douglas County annual budget.

Expenditures

Expenditures for the year totaled $1,214,743, **$72,642 under budget.** Expenditures included Personnel Services, Operating Supplies, Fleet Services, and Purchased Services and Contracts.

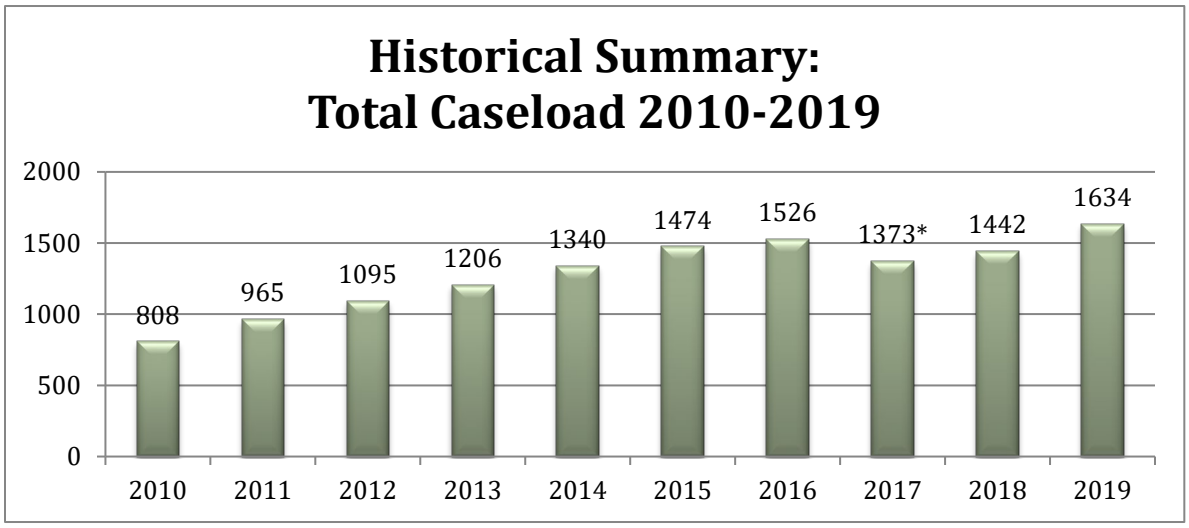


Revenues

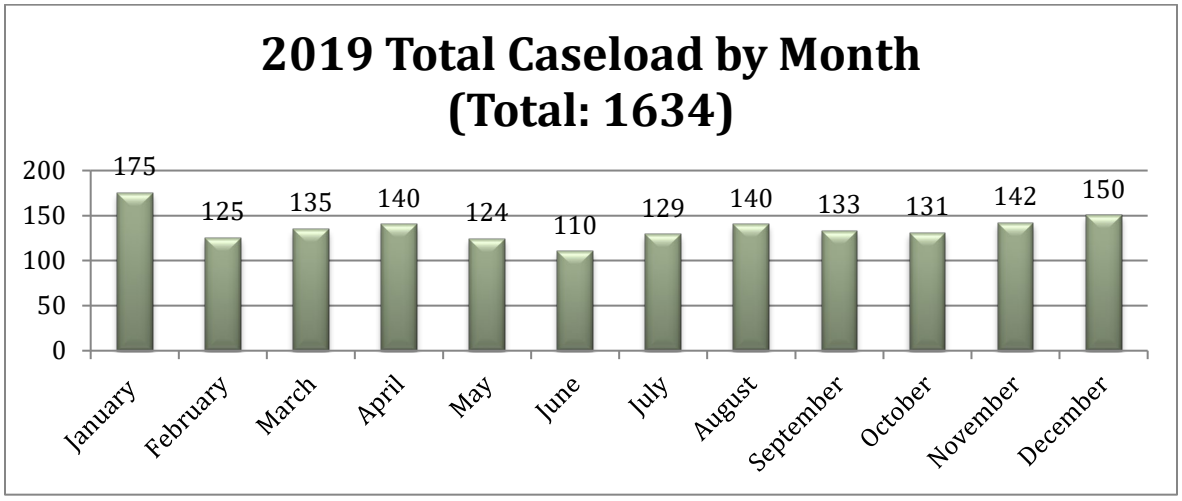
On occasion, the office receives revenue for various operational and administrative functions. For example, in 2019 DCCO received autopsy facility rental fees. Total revenue for 2019 was $540. This money went directly to the general fund. It did not go into the Coroner's budget as additional funding.

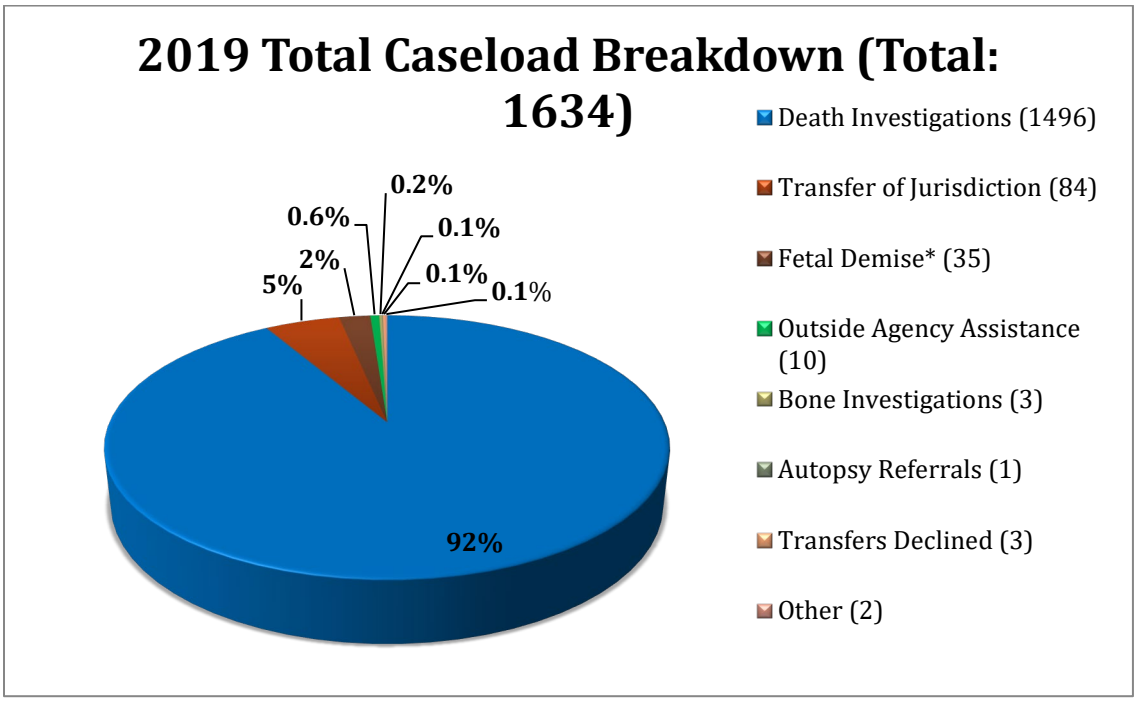
2019 CASELOAD

The overall total caseload for 2019 was 1634, which included Death Investigations (1496), Fetal Demises (35), Bone Investigations (3), Outside Agency Assistance (10), Transfers of Jurisdiction (84), Transfers Declined (3), Autopsy Referrals (1) which are out of county/private autopsies conducted at our facility, Other (2), and Pending (0).



DCCO call volume did not decrease, by intention referrals were decreased by 94%.





**A fetal demise is defined as "death prior to the complete expulsion or extraction from its mother of a product of human conception, occurring after the twentieth week of pregnancy, and does not include "induced termination of pregnancy" as defined by CRS §25-2-102.*

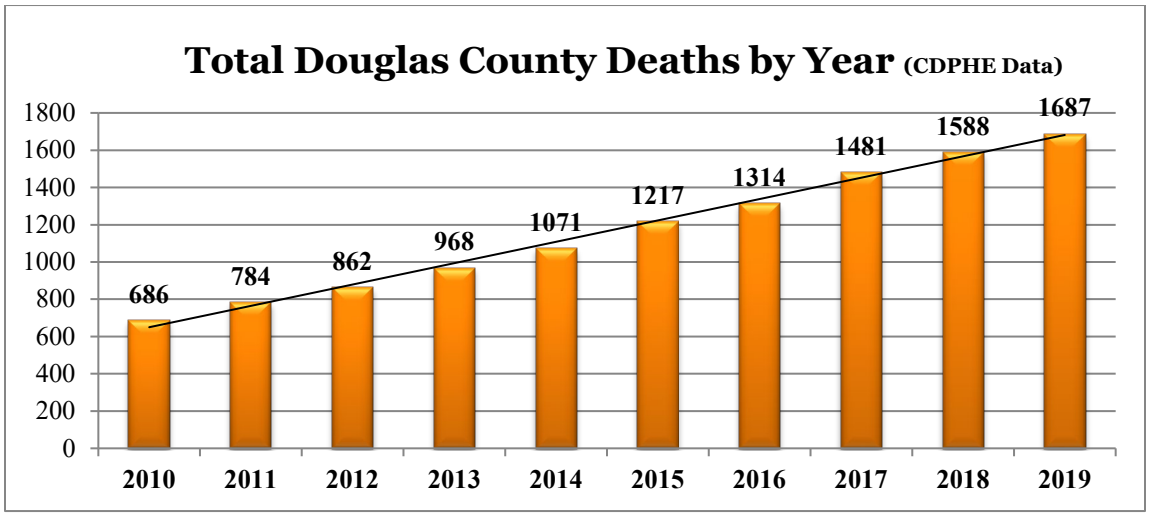
2015 – 2019 Comparison

	2015	2016	2017	2018	2019	YoY % Change
Overall Caseload	1474	1526	1373	1442	1634	12% ↑
Death Investigations	1209	1252	1215	1308	1496	13% ↑
Fetal Demises	32	36	27	30	35	14% ↑
Bone Investigations	6	4	4	2	3	50% ↑
Outside Agency Assistance	8	7	12	9	10	10% ↑
Transfer of Jurisdiction	66	100	105	90	84	7% ↓
Autopsy Referrals	153	125	7	0	1	100% ↑
Transfers Declined	0	0	0	0	3	300%↑
Other**	0	2	2	3	2	50% ↓

*** (2) Citizen Assist*

Of the overall caseload in 2019, not all cases are considered jurisdictional; Autopsy Referrals, Transfer of Jurisdictions, Outside Agency Assists, Transfers of Jurisdiction which we declined, Non-Human Bone Investigations, and Other. While cases require work to meet obligations of the office, they are not considered jurisdictional. **Therefore, the following statistics contained in this report focus only on cases which DCCO retained jurisdiction (1531); Death Investigations (1496), and Fetal Demises (35).**

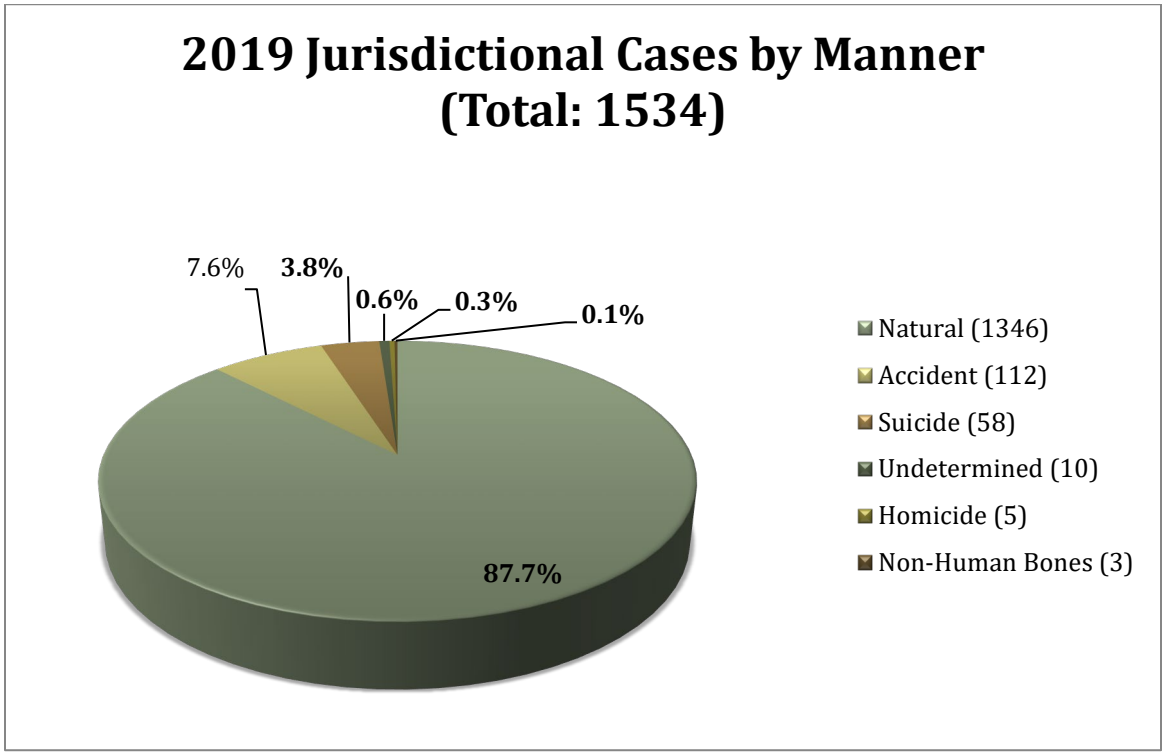
A death certificate is required to be filed with the Colorado Department of Public Health & Environment (CDPHE) for each death that occurs in Douglas County. Discrepancies may exist between CDPHE and Douglas County statistics due to transfer of jurisdiction and the locations of death listed on the death certificate. The chart below reflects the total number of death certificates filed with CDPHE that list the death as occurring in Douglas County since 2010. **93%** of all deaths occurring in Douglas County that were filed with the Colorado Department of Public Health and Environment (CDPHE) in 2019 were reported to the Douglas County Coroner's Office. The difference between CDPHE figures and DCCO figures is other county's deaths the state reported as DCCO cases in error. The average annual increase of deaths reported by CDPHE in Douglas County between 2010 and 2019 has been **9.5%** per year.



** Source Colorado Department of Public Health & Environment*

Jurisdictional Cases

As previously mentioned, one of the primary responsibilities of the Coroner's Office is determining the cause and manner of death. The cause of death is the condition (disease or injury) that created the sequence of events that resulted in the death, and the manner of death is based on the circumstances surrounding the cause of death. In addition, there are cases where the Coroner's Office investigates suspicious death related circumstances. Legally there are five manners of death: Natural, Accidental, Suicide, Homicide, and Undetermined.



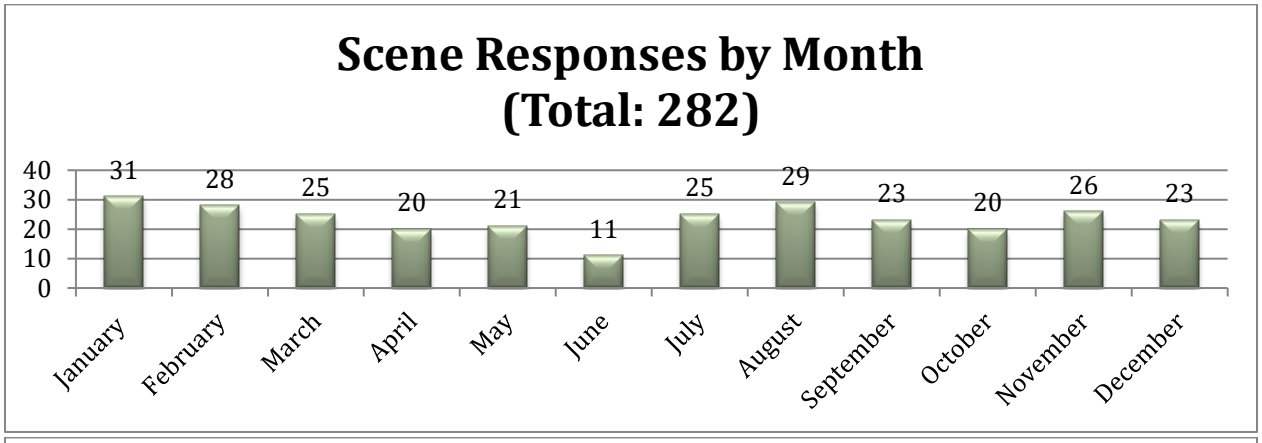
2013 – 2019 Comparison

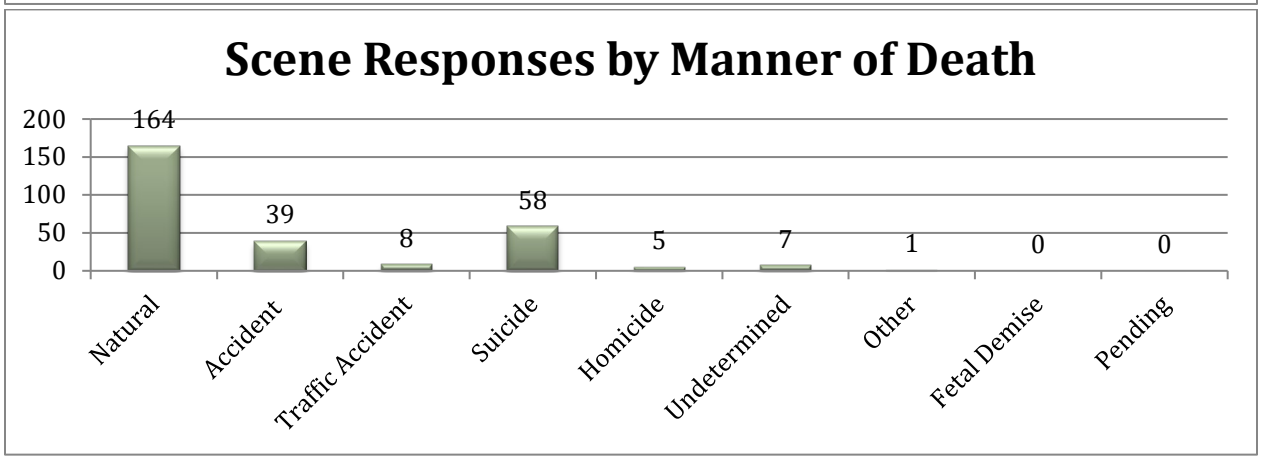
	2013	2014	2015	2016	2017	2018	2019
Natural	844	952	1065	1061	1061	1157	1346
Accident	97	104	106	106	121	111	112
Suicide	57	47	58	57	44	60	58
Homicide	0	2	2	4	6	3	5
Undetermined	5	6	7	7	3	7	10
Non-Human Bones			6	4	4	2	3

Scene Response

The Douglas County Coroner's Office responded to 282 death scenes which accounted for **18%** of all the jurisdictional deaths reported to the Coroner's Office in 2019. A scene response is typically made at the request of a Law Enforcement Agency however, the Coroner's Office also responds to calls at hospitals and care centers at their discretion, based on the circumstances reported surrounding the death. When Law Enforcement is involved in a scene investigation, the Law Enforcement Agency has jurisdiction of the scene, while the Coroner's Office has jurisdiction over the body and items directly relating to the death. A collaborative approach is used in these investigations to aid the Coroner's Office in determining the cause and manner of death, and the Law Enforcement Agency in determining if a crime has occurred.

After a scene investigation, the Medicolegal Death Investigator decides whether to transport the body to the Coroner's Office for further examination/investigation, or to release the body directly from the scene to a mortuary of the next-of-kin's choosing. The Coroner's Office may also transport a body to the office as a courtesy hold for the next-of-kin, while a mortuary selection is being made.



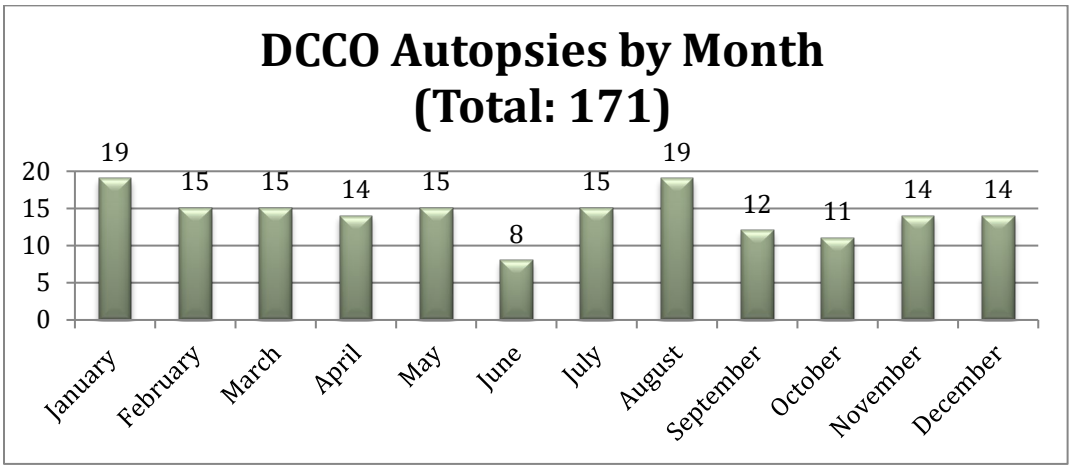


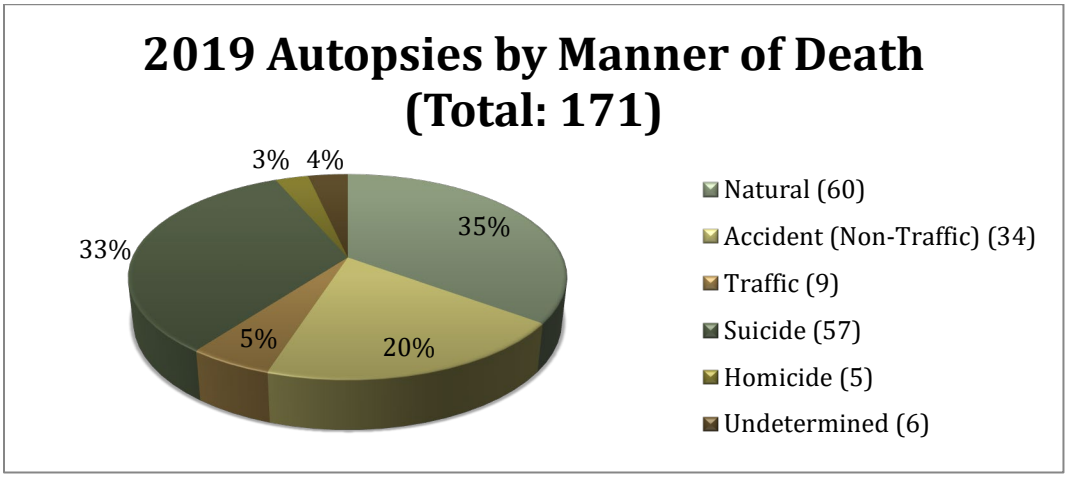
Of the 252 decedents transported to the Coroner's Office, 209 were transported by DCCO investigators. The remaining 18 were transported by external transport services, other counties, and Donor Alliance.

Autopsies

Of the cases the Douglas County Coroner's Office retained jurisdiction over in 2019, 171 or **11%** of the cases required an autopsy to aid in the determination of the cause and manner of death. In the majority of these cases where an autopsy was performed, toxicology and/or histology studies were also performed. Toxicology testing screens for alcohol, illicit drugs, prescription medications, and other substances; while histology testing allows the forensic pathologist to study tissues on a microscopic level.

Autopsies are performed in deaths where there is a lack of an established medical history, most suicides, most traffic incidents, and deaths where there is possible criminal action. An autopsy may not be performed in the instance where an individual was hospitalized and the medical record thoroughly documented sustained injuries, which clearly led to the cause of death.





Of the 171 autopsies performed in 2019, all were full autopsies. Toxicology studies were performed in 169 cases. **99.9**% of toxicology was completed in under 30 days. In addition, three autopsies were performed by outside hospitals.

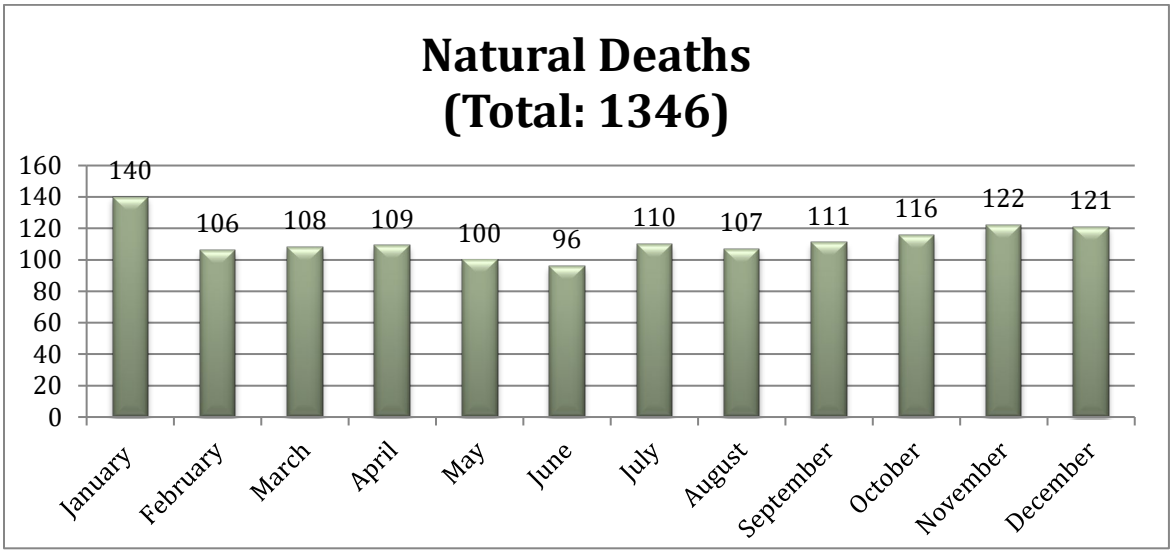
STATISTICS BY MANNER OF DEATH

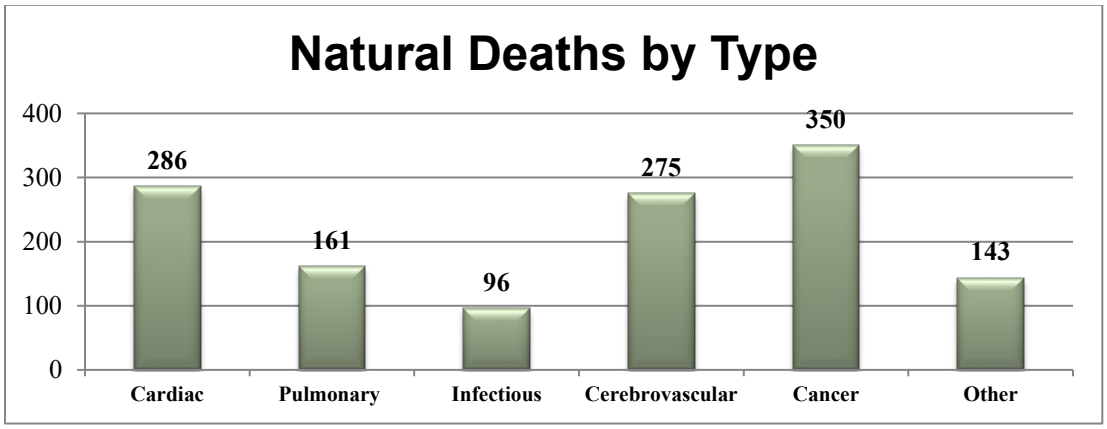
Natural Deaths

Natural deaths are classified as deaths occurring due to a natural disease and/or aging process. For statistical purposes, the natural deaths reported to the Douglas County Coroner's Office are broken down into deaths due to cardiac disease (i.e. cardiomyopathy or atherosclerotic cardiovascular disease), pulmonary disease (i.e. chronic obstructive pulmonary disease), infectious disease (i.e. pneumonia or sepsis), cerebrovascular disease (i.e. dementia or amyotrophic lateral sclerosis), cancer, or other disease (i.e. renal failure or complications of diabetes).

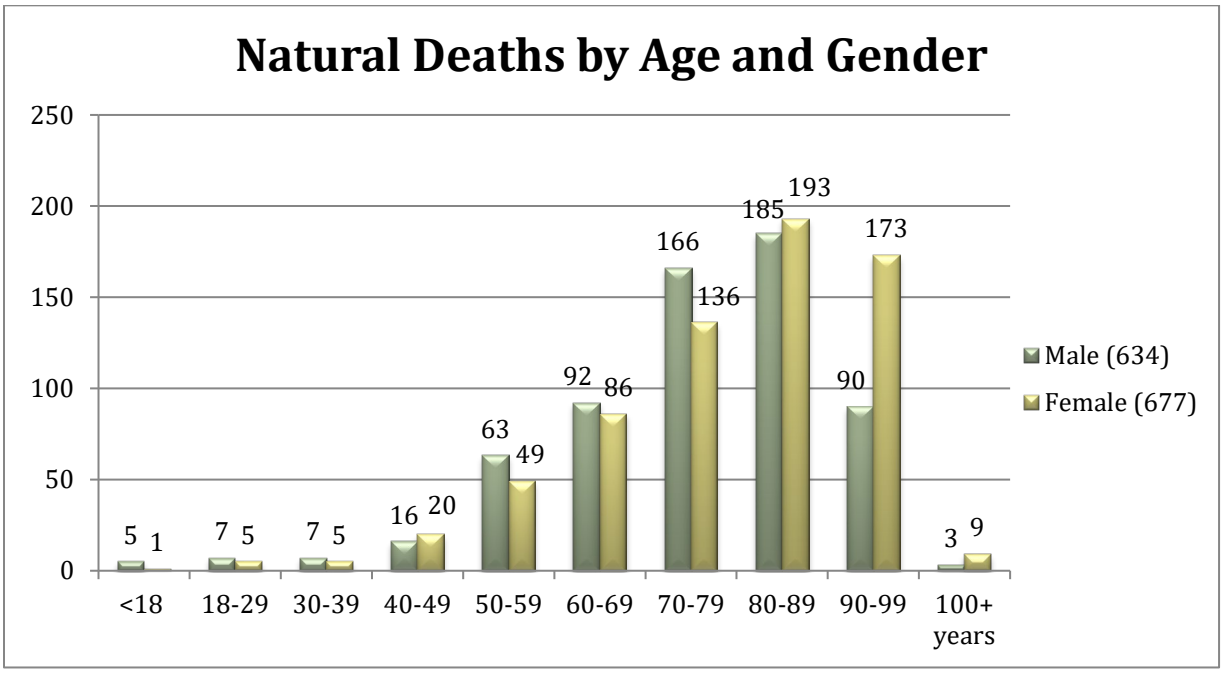
In many instances when a natural death is reported, the decedent's physician will issue the death certificate. The majority of deaths reported to the Coroner's Office are deaths due to natural causes.

Natural deaths accounted for **87.7%** of the total DCCO jurisdictional deaths for 2019.





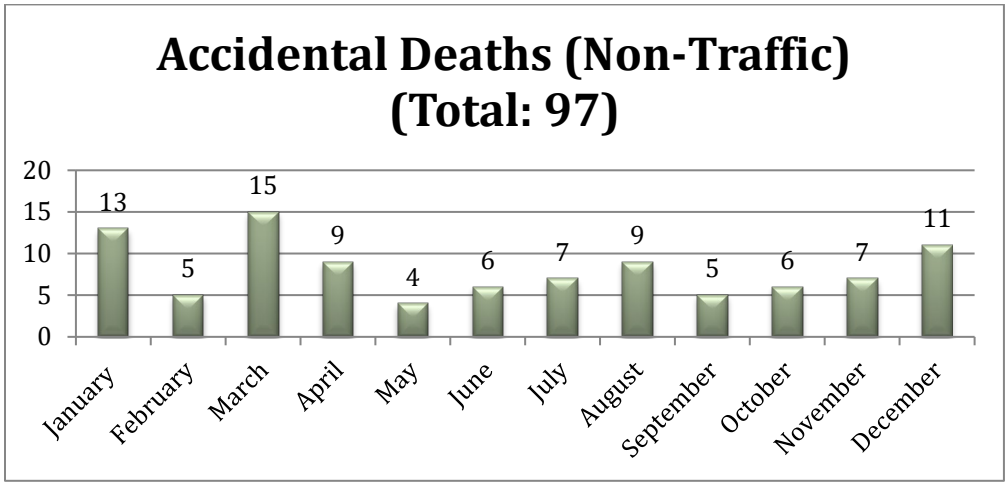
Of natural deaths, 286 were deemed cardiac related, 161 pulmonary, 96 infectious, 275 cerebrovascular, 350 cancers, and 143 other. This does not include the 35 fetal demise deaths that were reported in 2019.



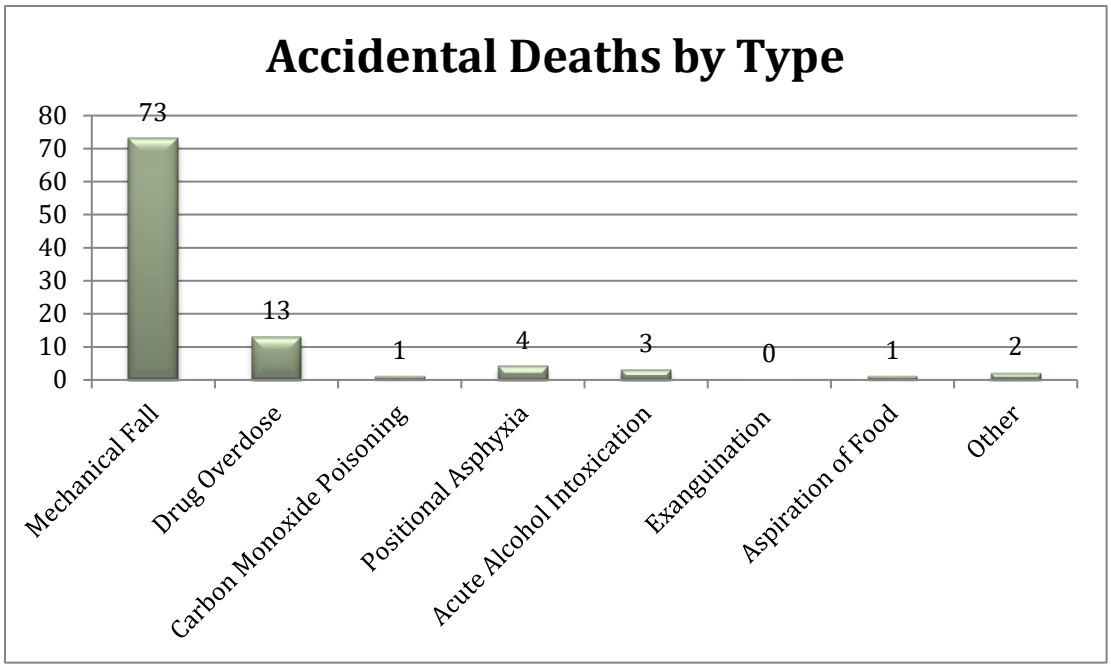
Accidental Deaths

Accidental deaths are deaths that result from injury or poisoning that occurred without the intent for harm or to cause death. They are divided into Non-Traffic, and Traffic related sub-categories.

Non-Traffic accidental deaths accounted for **6.3%** of the total DCCO jurisdictional deaths for 2019.



Of the Non-Traffic related accidental deaths reported to the Douglas County Coroner's Office, most of the deaths were related to an unintentional drug overdose or complications of a mechanical fall; typically, a fracture or head injury.



Traffic related accidental deaths include deaths in which the deceased was an occupant of a motor vehicle, motorcycle, tractor, bicycle, pedestrian, etc. involved in a motor vehicle-pedestrian incident.

Traffic related accidental deaths accounted for **1%** of the total DCCO jurisdictional deaths for 2019.

Suicide Deaths

Deaths that are classified as suicide are those that occurred as a result of self-inflicted injury. In 2019, **72%** of the deaths were those of males, which is consistent with nationwide figures. The most common method of suicide in 2019 was firearm related **(52%)** followed by asphyxiation, most commonly due to hanging **(18%)**.

Suicide deaths accounted for **3.8%** of the total DCCO jurisdictional deaths for 2019.

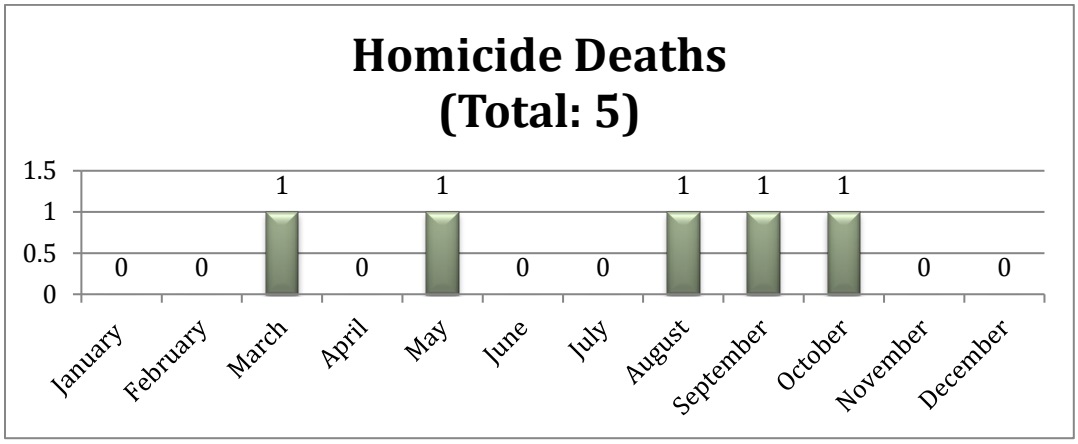
Homicide Deaths

Homicide deaths are those deaths occurring as a result of, the act of another person, or "death at the hand of another." For purposes of classifying the manner of death as a homicide, there is no need to imply criminal intent.

Homicide deaths accounted for **0.3%** of the total DCCO jurisdictional deaths for 2019.



Undetermined Deaths

Deaths that are classified as undetermined are those deaths in which, after a thorough investigation and consideration of all information available, one manner of death is no more compelling than another manner of death. There are some instances where the cause of death is apparent; however, the circumstances leading up to the cause of death are undetermined based on the available evidence.

Undetermined deaths accounted for **0.65%** of the total DCCO jurisdictional deaths for 2019.

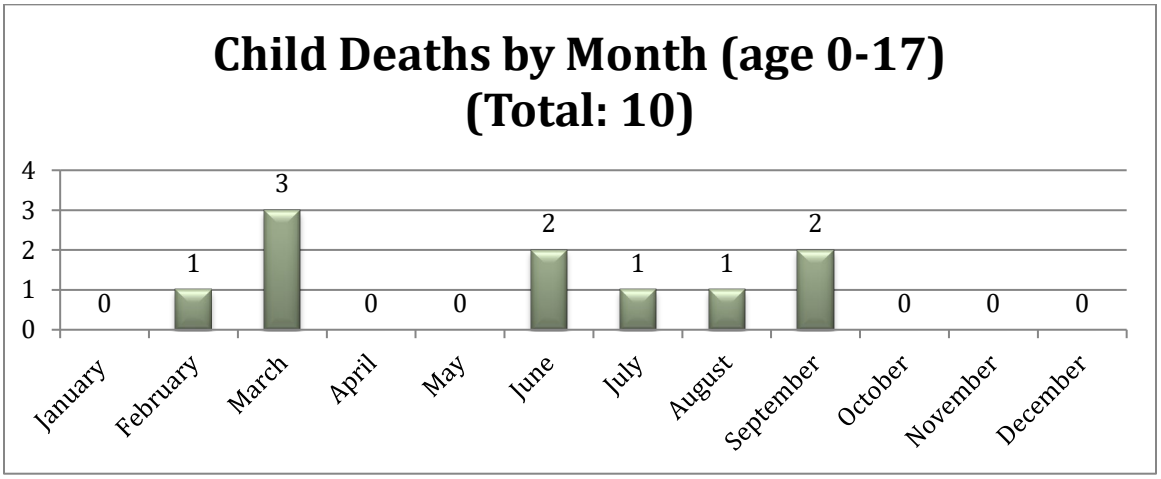
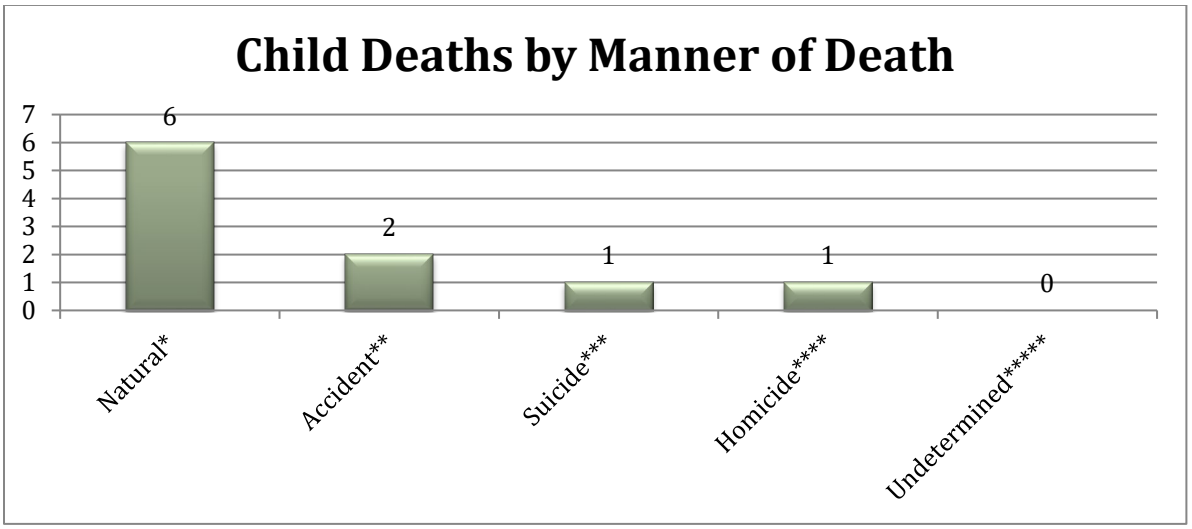
Child Deaths

Child deaths calculated below are deaths of individuals under the age of 18 years-old.

Child deaths accounted for **0.65%** of the total DCCO jurisdictional deaths for 2019.



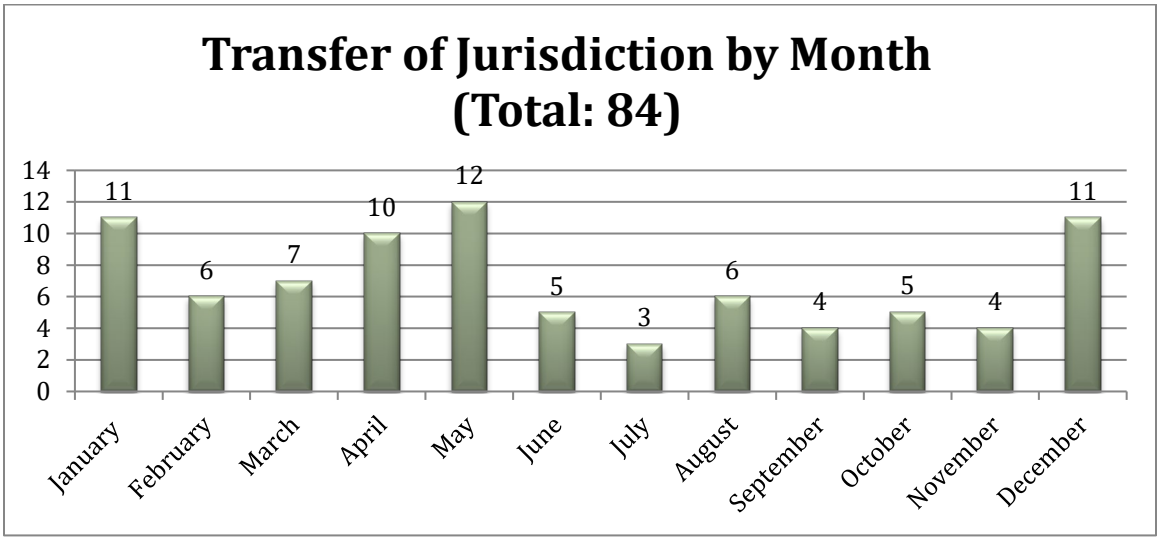


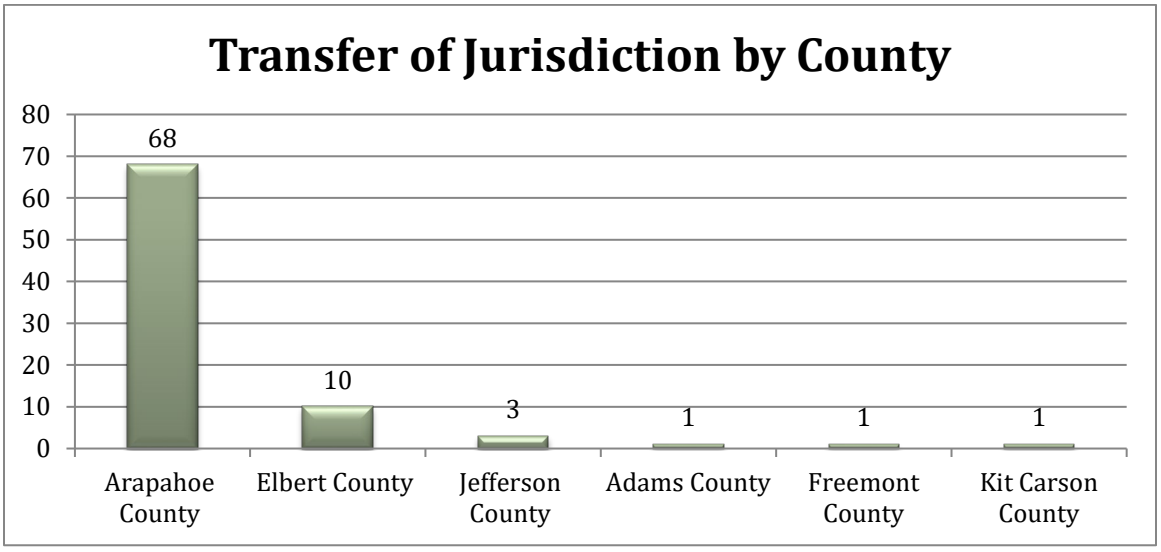
**Of the six (6) natural deaths, one (1) death was due to premature delivery, one (1) was due to sepsis, two (2) were due to cancer, one (1) was due to Lenox-Gastaut Syndrome, and one (1) was due to idiopathic progressive neuropathy.*
***Of the two (2) accidental deaths, one (1) was due to positional asphyxia and one (1) was due to craniocerebral injuries.*
****The one (1) suicide death was due to asphyxiation. ****The one (1) homicide death was due to gunshot wound. *****There were no undetermined child deaths in 2019.*

Transfer of Jurisdiction

On occasion, a death occurs in Douglas County but the initiating event to the death occurred in another jurisdiction. These deaths can include those where an individual is transported to a hospital in Douglas County, from a location such as a residence in another jurisdiction, or deaths that occur due to an injury that (s)he sustained in another jurisdiction. Transfer of jurisdiction of cases is permitted under Colorado Revised Statute §30.10.606.

Of the cases transferred to another jurisdiction, 53 deaths occurred at Parker Adventist Hospital, 22 occurred at Sky Ridge Medical Center, two (2) occurred at Children's Hospital, one (1) occurred at The Center at Lincoln, one (1) occurred at Medical Center of Aurora, and two (2) occurred UC Health Highlands Ranch Hospital, and three (3) occurred at various skilled nursing facilities in Douglas County.



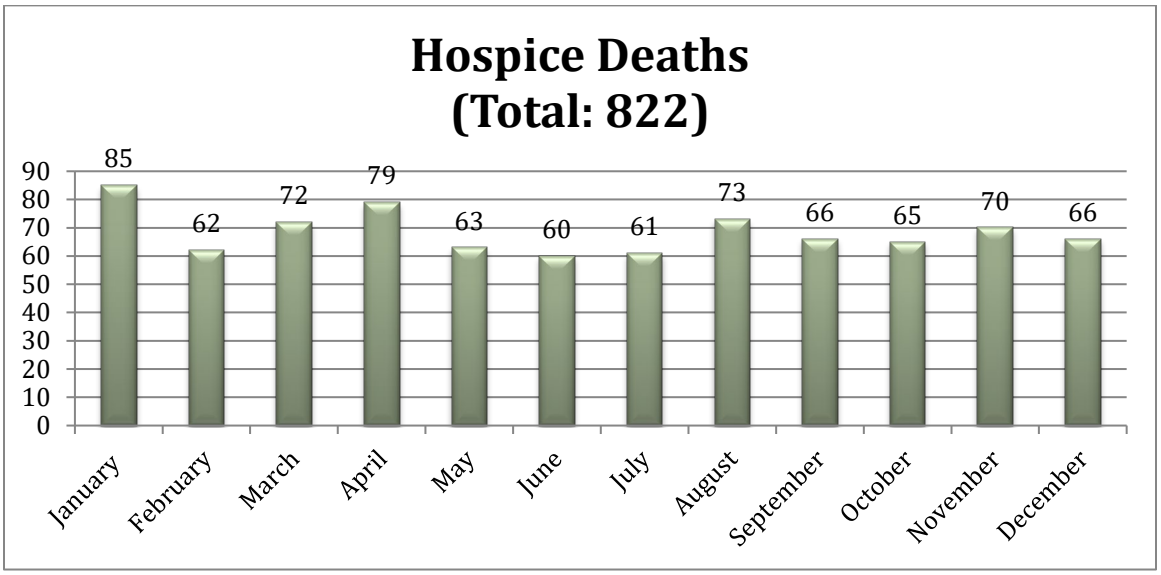


Hospice Deaths

All hospice deaths that occur in Douglas County are reportable to the Coroner's Office. In 2019, 822 deaths were reported by hospice agencies.

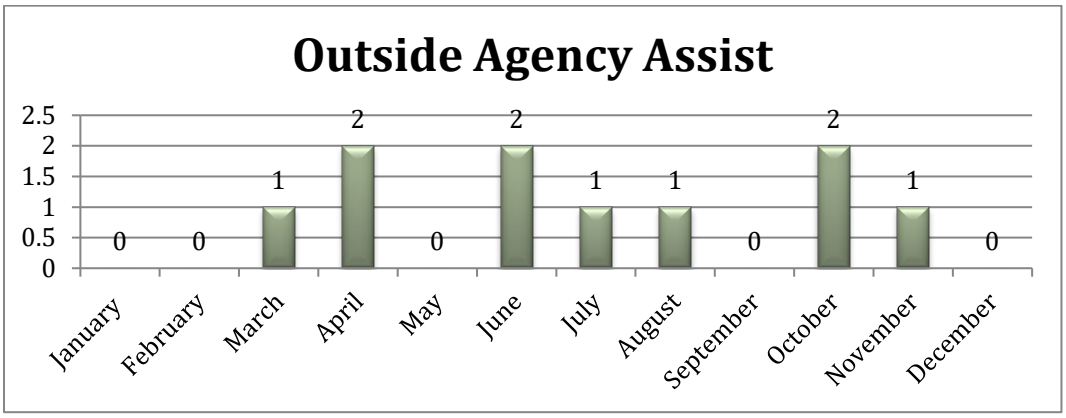
Of the 822 hospice deaths, 785 (**95%**) were natural hospice deaths and 35 (**5%**) were accidental hospice deaths.

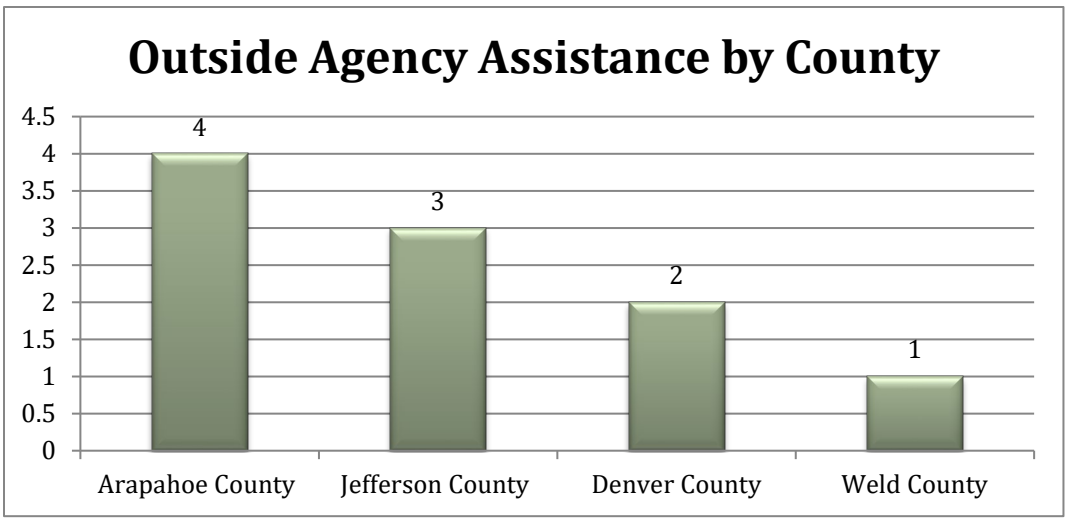
Hospice deaths accounted for **53.6%** of all jurisdictional deaths reported to the Douglas County Coroner's Office in 2019.



Outside Agency Assistance

One of the mandated responsibilities of the Coroner's Office is identifying, locating, and notifying legal next-of-kin. The Douglas County Coroner's Office also assisted other agencies with performing death notifications for legal next-of-kin located in Douglas County for deaths that occurred in another jurisdiction.





Law Enforcement Agencies

The Douglas County Coroner's Office works in collaboration with Law Enforcement Agencies with jurisdiction in Douglas County. Law Enforcement Agencies in Douglas County include the Aurora Police Department, Castle Rock Police Department, Colorado State Patrol (CSP), Douglas County Sheriff's Office (DCSO), Littleton Police Department, Lone Tree Police Department, and Parker Police Department.

Of note: The total cases investigated with Law Enforcement may differ from the scene responses made by the Coroner's Office; due to some deaths having been delayed due to hospitalization following an incident or having occurred at a care facility where no response from the Coroner's Office was necessary.

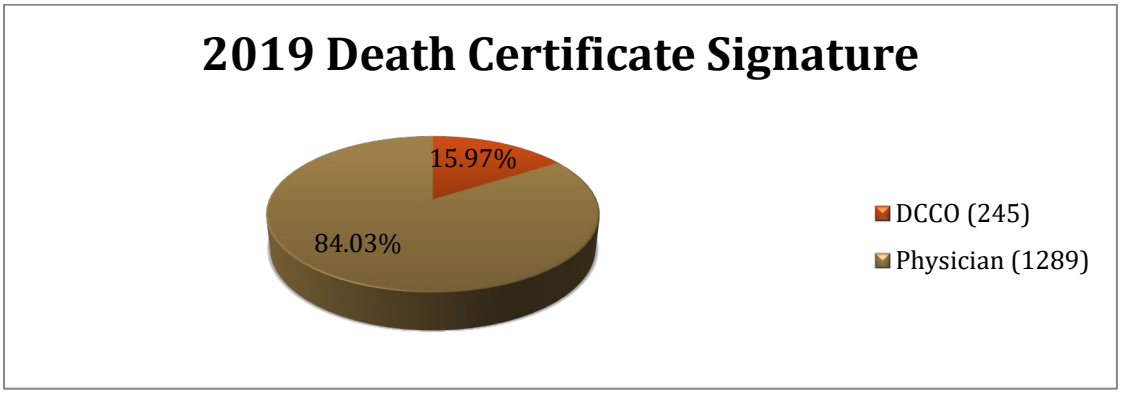
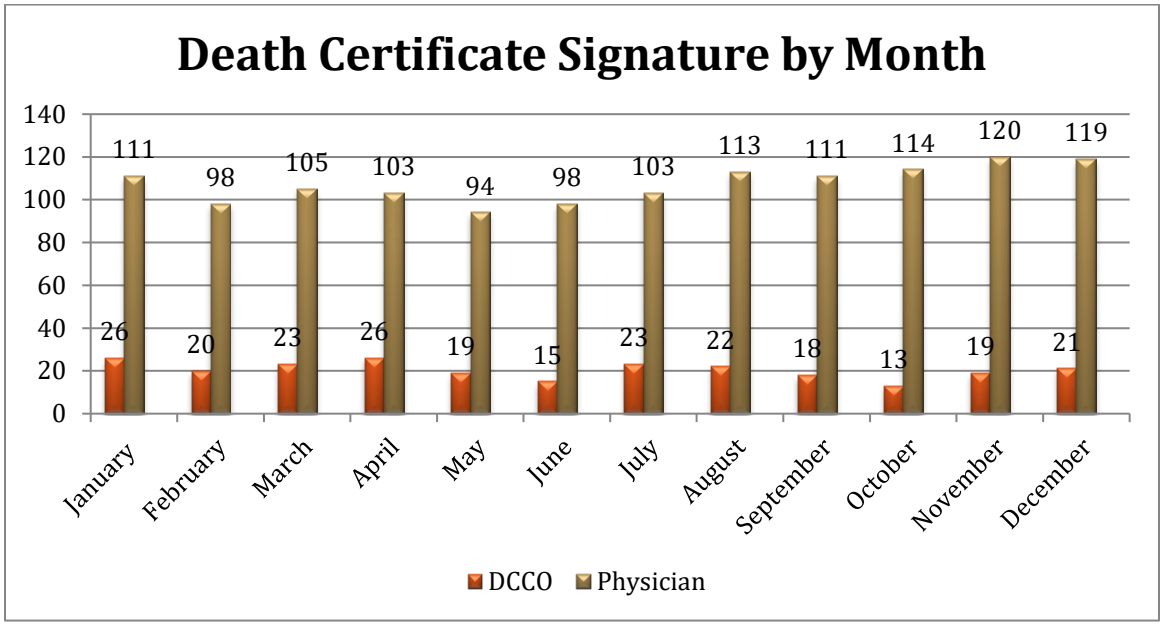
Certification of Death Certificates

When a case is reported to the Coroner's Office, the death certificate for the case can be handled in multiple different ways: the case can be released to a private physician to sign the death certificate; the Coroner's Office can assume jurisdiction of the case and perform an investigation (may or may not include a physical examination such as an autopsy) to determine cause and manner of death and issue a death certificate, or the coroner can co-sign a death certificate with a private physician following an investigation into the cause and manner of death. The Douglas County Coroner's Office also received reports of deaths that occurred in Douglas County that are subsequently transferred to another jurisdiction, due to the location of an initiating event (see Transfer of Jurisdiction in this report).

Of the 1534 reported cases to DCCO, 245 death certificates were signed by DCCO and 1289 death certificates were signed by a private physician.



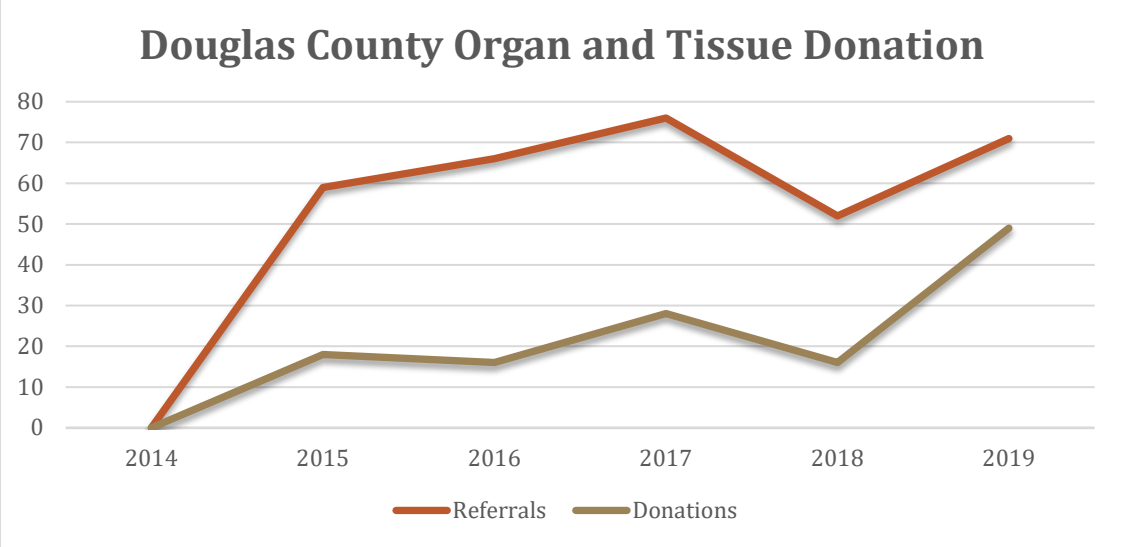


Organ and Tissue Donation

The Uniform Anatomical Gift Act was passed in the United States in 1968, with subsequent revisions being made in 1987 and 2006. The Act has put in place a regulatory framework for the donation of corneas, tissues, organs, and other body parts. An individual can provide first-person consent to be a donor of organs, bone, tissues, corneas, or other body parts prior to their death, by placing themselves on the donor registry. After death, an individual's next-of-kin can provide authorization for recovery if they so wish. **It is the goal of the Douglas County Coroner's Office to facilitate, whenever applicable, effective collaboration with the donation agencies in the Denver Metro Area of Colorado (Donor Alliance and Rocky Mountain Lions Eye Bank) to honor the wishes and rights of the deceased and their families.**

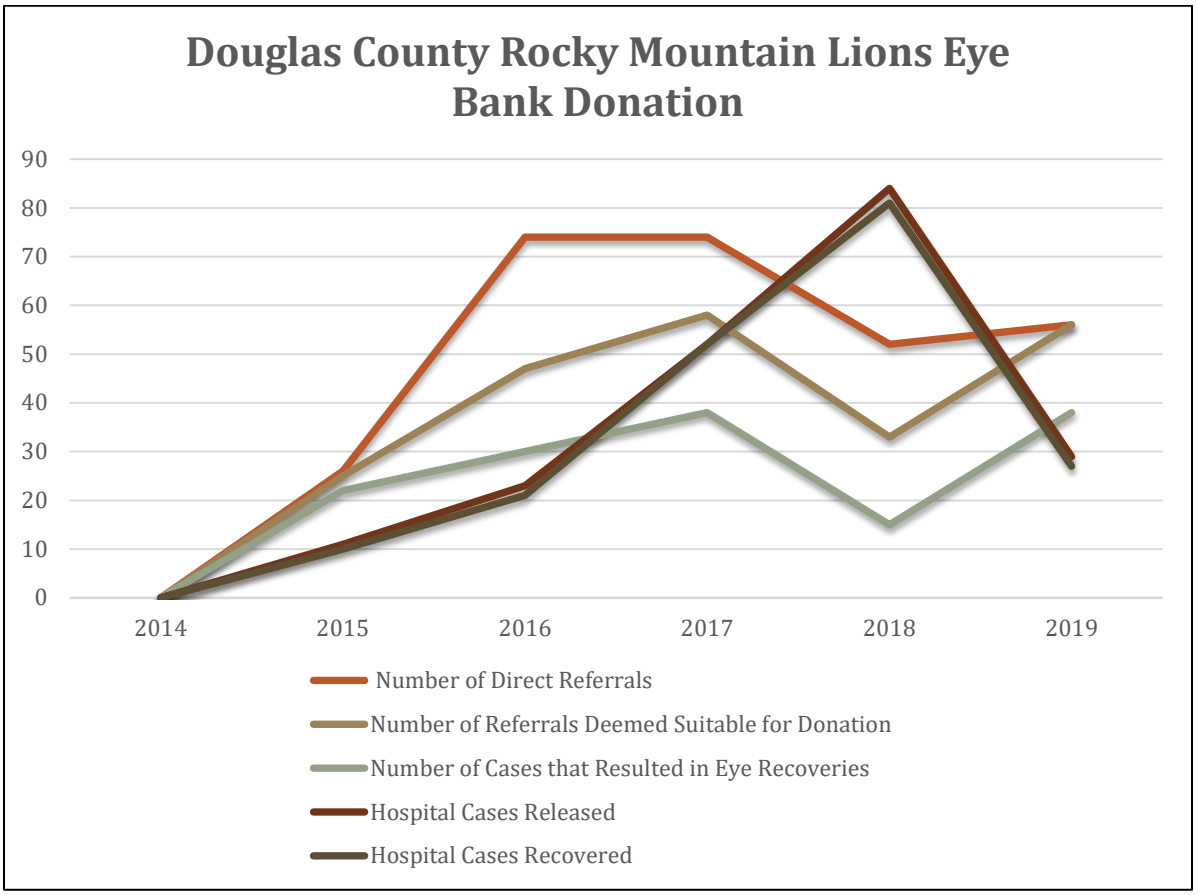
After approval for release by the Coroner's Office, referrals are made to the procurement agencies either from a hospital or directly from a Coroner's Office. The procurement agencies then work with the family of the individual to determine if the individual is medically suitable to be a donor.

DONOR ALLIANCE
Organ & Tissue Donation



Prior to 2015, the Douglas County Coroner's Office did not allow referrals to be made to Donor Alliance. In 2015, when Coroner Romann took office, she immediately changed office policy in order to honor individuals' rights, and the rights of the next-of-kin and allow donation. As a result, since that time, DCCO has helped hundreds of families honor their loved one's rights.

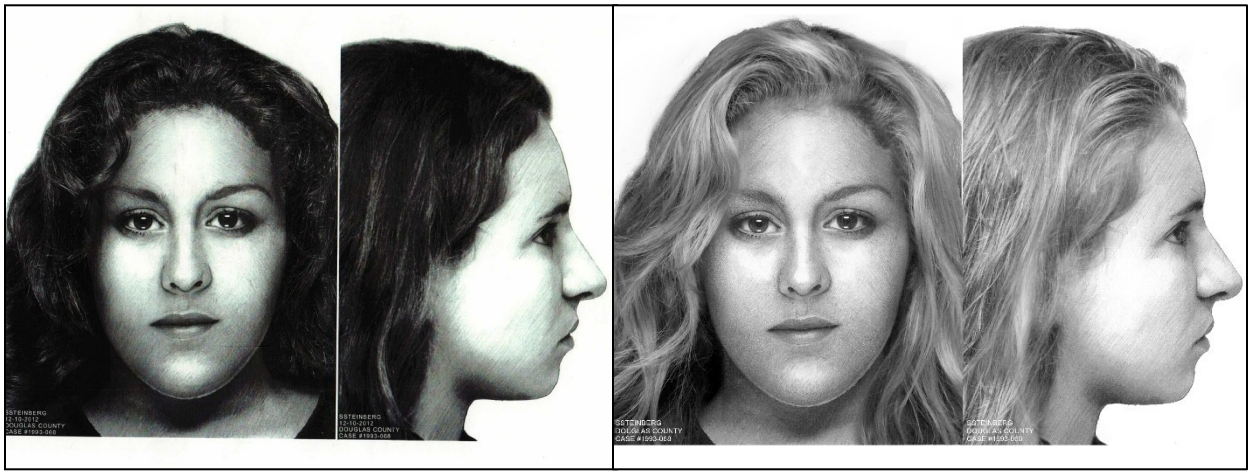
As in 2014, the Douglas County Coroner's Office did not make any direct referrals to the Rocky Mountain Lions Eye Bank (RMLEB) for cornea donation. As with skin and tissue donation, after taking office in 2015, Coroner Romann made honoring the wishes and rights of the decedent and their families a priority, thus instituting office policy that changed the face of donation for Douglas County. In 2019, the Douglas County Coroner's Office made 56 direct referrals to RMLEB; with 56 of those deemed suitable for donation. Out of those referrals, 38 cases resulted in eye recoveries; with 56 corneas successfully transplanted.



Additionally, there were 29 cases that were referred to RMLEB by local hospitals in deaths where the Douglas County Coroner's Office had jurisdiction over. Of those cases 27 donors were recovered, resulting in 32 corneas transplanted.

Unidentified Remains

The Douglas County Coroner's Office has one open case of unidentified remains, a cold case from 1993. On June 15, 1993, a young female was discovered in the southwest region of Douglas County near Rainbow Falls campground. She was found wearing only a black Harley-Davidson T-shirt and a few pieces of jewelry. The Douglas County Coroner's Office, in cooperation with the Douglas County Sheriff's Office, has continued working on the Jane Doe case 24 years after her death. Her remains are currently being held at the Coroner's Office. The Douglas County Coroner's Office is committed to using all avenues available to identify her in hope of reuniting her with her family.



Left: Forensic Artist Rendering from 2012. Right: Updated Forensic Artist Rendering in May 2015. Both by S. Steinberg

In 1993, after valiant efforts to identify her were unsuccessful, the decedent was buried in Cedar Hill Cemetery (Castle Rock, CO) under the name of Jane Doe. On October 12, 2012, her remains were exhumed from her grave for additional forensic analysis, which was not available at the time of her death. A complete DNA analysis was obtained and a new forensic artistic rendering was completed by Samantha Steinberg, a forensic artist at the Miami-Dade Police Department.

In partnership with the Douglas County Sheriff's Office (DCSO), the Douglas County Coroner's Office (DCCO) continues to work diligently on attempting to identifying Jane Doe. This year extensive efforts were made working with DNA experts and submitting obtaining samples to submit suitable submission's. In addition, DCCO continues to follow-up on "hits" with NAMUS, a national missing and unidentified persons system.

Unclaimed Bodies / Exhumations

The Douglas County Coroner's Office had no unclaimed bodies in 2019. In addition, The Douglas County Coroner's Office had no exhumations in 2019.
