

Chemical Sanitizers

50-200 ppm
for chlorine
solutions

100-400
ppm for
quaternary
ammonia
solutions

Sanitizer solution:

- Read the label instructions of your sanitizer solution for proper mixing and testing instructions
- The two most common solutions are chlorine and quaternary ammonia

Sanitizing a surface:

1. Wash with warm soapy water
2. Rinse with clean water
3. Wipe with sanitizer solution and leave wet for at least 2 minutes
4. Air dry

Remember:

- Use test strips to determine the proper strength of sanitizer
- Each type of sanitizer requires its own test strip
- Too much sanitizer is toxic and can cause chemical poisoning
